

SHASHANK S

OpenShift & Kubernetes Platform Engineer

agastyaaradhya69@gmail.com | +91 8095451955 | Bengaluru, Karnataka

PROFESSIONAL SUMMARY

Platform engineer with nearly 3 years of experience deploying and managing Kubernetes and Red Hat OpenShift clusters across production and hybrid environments. Hands-on with OpenShift Virtualization (VM lifecycle management), multicluster fleet management via RHACM, Docker containerization, Trident CSI storage integration, and Jenkins CI/CD pipelines. Experienced in infrastructure automation using Python and Shell scripting, cluster monitoring with Prometheus and Grafana, and cross-team collaboration in agile delivery cycles.

TECHNICAL SKILLS

Container & Orchestration: Kubernetes (K8s), Red Hat OpenShift, OpenShift Virtualization, Docker, RHACM — multicluster fleet management

IaC & Automation: Terraform, Shell Scripting, Python; Ansible (basics, actively learning)

CI/CD: Jenkins — pipeline setup, build triggers, deployment stages, RCA

Monitoring: Prometheus, Grafana — cluster health dashboards, alerting, incident investigation

Operating Systems: Linux — RHEL, Ubuntu, SUSE; command-line administration in production environments

Cloud & Networking: AWS (EKS, EC2, S3, IAM); TLS/SSL, DNS, Load Balancers

Virtualisation: OpenShift Virtualization, VMware vSphere / ESXi — VM provisioning and management

Storage: NetApp ONTAP, Trident CSI — NFS, SMB, iSCSI, NVMe/TCP persistent volumes

Languages: Python, Shell/Bash; Go (actively learning)

EXPERIENCE

Software Engineer — DevOps & Platform | [NetApp India \(via Vevolve Software\)](#) | *Apr 2025 – Present*

- Deploy and manage Kubernetes and Red Hat OpenShift clusters; contribute to cluster configuration, feature implementations, and platform stability across multicluster environments using RHACM.
- Worked with OpenShift Virtualization — created and managed VMs, configured virtual machine workloads on OpenShift clusters for development and test use cases.
- Automated infrastructure validation and workload execution using Python and Shell scripting with Terraform-based IaC; built and maintained Jenkins CI/CD pipelines with secure engineering practices and RCA.
- Integrated NetApp ONTAP storage using Trident CSI for dynamic provisioning of NFS, SMB, iSCSI, and NVMe/TCP persistent volumes; monitored cluster health with Prometheus and Grafana dashboards.
- Maintained cluster documentation, runbooks, and conducted knowledge-transfer sessions on OpenShift best practices for internal teams.

Software Engineer | [Tata Elxsi, Bengaluru](#) | *Mar 2024 – Mar 2025*

- Built RESTful backend microservices (Python/Flask) for a Flight Management System; containerised services with Docker and deployed to AWS EKS with CI/CD automation via Jenkins.
- Diagnosed cluster issues via Kubernetes events and API responses; triaged incidents by severity and collaborated with QEs and stakeholders across the full SDLC.
- Deployed containerized services to AWS EKS; worked across the SDLC from requirements translation to delivery, collaborating with QEs and stakeholders.

Software Engineer Intern | [TM Technologies, Shivamogga](#) | *Jul 2023 – Feb 2024*

- Designed a microservices-based distributed system for student and faculty management using RESTful APIs; applied version control (Git) and CI/CD workflows in Linux environments.
- Gained hands-on exposure to Docker, Kubernetes, Linux (RHEL), and VMware vSphere / ESXi — VM provisioning and management in a virtualised lab environment.

EDUCATION & CERTIFICATIONS

B.E. Computer Science & Engineering — PES Institute of Technology & Management, Shimoga (2019–2023)

Certifications:

- Kubernetes for Beginners, Docker Essentials — Udemy
- AWS Cloud Technical Essentials, Linux & DevOps on AWS — Coursera
- Red Hat OpenShift / ONTAP / Trident Lab — NetApp
- Linux Administration — Tata Elxsi (Internal Training)
